Over 40 New Products in this Catalogue

Relief Cartridge Valves

Page 9: The **RP*S** is a seated style pilot operated relief valve. This provides reduced leakage, faster response and a reduced pressure overshoot to give improved pressure control.

Page 10: The **RPGT** is a "soft start" relief valve available in series 2 only providing a pressure ramping over 300 milliseconds when it opens to provide excellent pressure protection and reduce shock.

Page 13: The **RBAP** is an electro-proportional, direct acting pilot relief valve that fits into the Sun T-8A cavity. It can be used as a pilot valve on it's own or together with many types of main stage pressure control valves that have the T-8A cavity in the end of the cartridge.

Page 14: The **RP*C-8** is a normally closed spool type modulating valve, with a T-8A cavity in the end. This would enable any of the Sun pilot valves, such as the RBAP proportional valve, to be fitted into the end to make a high capacity proportional relief valve.

Page 15: The **RP*S-8** is a seated style normally closed modulating valve, with a T-8A cavity in the end. This would enable any of the Sun pilot valves, such as the RBAP proportional valve, to be fitted into the end to make a proportional relief valve with low leakage on the main stage.

Page 18: The **RV*S** is a ventable, seated style, pilot operated relief valve. This provides reduced leakage, faster response and a reduced pressure overshoot to give improved pressure control.

Page 20: The **RV*D-8** is a normally closed, balanced piston, modulating element with a T-8A cavity in the end. The cartridge is ventable and also has an external drain connection. This would enable any Sun pilot valve, such as the RBAP proportional valve, to be fitted into the end to make a ventable proportional relief with separate drain port.

Sequence Cartridge Valves

Page 23: The **RSDC-8** is a normally closed, balanced piston, modulating element with a T-8A cavity in the end and external drain. This would enable any Sun pilot valve such as the RBAP proportional valve to be fitted into the end to make a relief valve with separate pilot drain.

Reducing/Relieving Cartridge Valves

Page 37: The **PB*B-8** is a normally open modulating element with a T-8A cavity in the end. This would enable any Sun pilot valve such as the RBAP proportional valve to be fitted to make a proportional pressure reducing valve.

Page 38: The **PP*B-8** is a normally open modulating element with a T-8A cavity in the end. This would enable any Sun pilot such as the RBAP proportional valve to be fitted into the end to make a proportional pressure reducing/ relieving valve.

Page 39: The **PV*A-8** is a normally open modulating element with a T-8A cavity in the end and an external drain. This would enable any Sun pilot valve, such as the RBAP proportional valve, to be fitted into the end to make a proportional pressure reducing/relieving valve with external drain.

Page 40 and 41: The **PRD*** is an electro-proportional, direct acting, pressure reducing/relieving valve available in series 1 only. There are two versions available, one with low leakage and the other with higher leakage and improved response.

Flow Control Cartridge Valves

Page 73: The **FPCC** is an electro-proportional, normally closed throttle valve available in series 1 only. It provides some pressure compensation but needs a separate compensator for more accurate control.

Page 74: The **FPCH** is an electro-proportional, normally open throttle valve available in series 1 only. It provides some pressure compensation but needs a separate compensator for more accurate control.

Priority Flow Control Cartridge Valves

Page 78: The **FV*A-8** is a ventable, fixed orifice, priority flow control valve with a T-8A cavity in the end of the cartridge. This enables a Sun pilot solenoid, pneumatic or manual valve to be fitted into the cartridge to select the priority flow condition or bypass all flow to tank.

Logic Elements

Page 89: The **LO**-8** is a poppet type, spring biased closed, pilot-to-close unbalanced logic valve with a T-8A cavity in the end of the cartridge. This enables a Sun pilot solenoid, pneumatic or manual valve to be fitted into the cartridge to select the valve in the open or closed condition.

Page 95: The **DO*R**-8 is a poppet type, pilot-to-close, normally open balanced logic valve with a T-8A cavity in the end of the cartridge. This enables a Sun pilot solenoid, pneumatic or manual valve to be fitted into the cartridge to select the valve in the open or closed condition.

Page 100: The **DK*R-8** is a poppet type, pilot-to-open, normally closed balanced logic valve with a T-8A cavity in the end of the cartridge. This enables a Sun pilot solenoid, pneumatic or manual valve to be fitted into the cartridge to select the valve in the open or closed condition.

Over 40 New Products in this Catalogue

Directional Cartridge Valves

Page 105: The **DRBO** is direct acting, externally drained, normally closed, three-way directional valve in series 1 only. It is available with an adjustment on the pressure at which the valve will switch.

Page 105: The **DRBP** is direct acting, externally drained, normally open, three-way directional valve in series 1 only. The valve is available with an adjustment on the pressure at which the valve will switch.

Page 105: The **DRBR** is a direct acting, internally drained, externally piloted, three-way directional valve in series 1 only. The valve is available with an adjustment on the pressure at which the valve will switch.

Page 106: The **DV*A-8** is a direct acting, normally open, two-way directional valve with a T-8A cavity in the end. This enables a Sun pilot solenoid, pneumatic or manual valve to be fitted into the cartridge to select the valve in the open or closed condition.

Page 106: The **DV*B-8** is a direct acting, normally closed, two-way directional valve with a T-8A cavity in the end. This enables a Sun pilot solenoid, pneumatic or manual valve to be fitted into the cartridge to select the valve in the open or closed condition.

Page 106: The **DV*C-8** is a direct acting, three-way directional valve with Port 1 blocked and a T-8A cavity in the end. This enables a Sun pilot solenoid, pneumatic or manual valve to be fitted into the cartridge to select the valve in the open or closed condition.

Page 106: The **DV*D-8** is a direct acting, three-way directional valve with Port 1 open and a T-8A cavity in the end. This enables a Sun pilot solenoid, pneumatic or manual valve to be fitted into the cartridge to select the valve in the open or closed condition.

Page 107: The **DV*M-8** is a vent-to-operate two-position two-way, normally open directional valve with a T-8A cavity in the end and external drain. This enables a Sun pilot solenoid, pneumatic or manual valve to be fitted into the cartridge to select the valve in the open or closed condition.

Page 107: The **DV*N-8** is a vent-to-operate two-position two-way, normally closed directional valve with a T-8A cavity in the end and external drain. This enables a Sun pilot solenoid, pneumatic or manual valve to be fitted into the cartridge to select the valve in the open or closed condition.

Page 107: The **DV*O-8** is a vent-to-operate two-position three-way directional valve with a T-8A cavity in the end and external drain. This enables a Sun pilot solenoid, pneumatic or manual valve to be fitted into the cartridge to select the valve in the open or closed condition.

Page 107: The **DV*P-8** is a vent-to-operate two-position three-way directional valve with a T-8A cavity in the end and external drain. This enables a Sun pilot solenoid, pneumatic or manual valve to be fitted into the cartridge to select the valve in the open or closed condition.

Page 108: The **DF*A-8** two-position, two-way normally closed port 1 to 2, directional valve with a T-8A cavity in the end of the cartridge. This enables a Sun pilot solenoid, pneumatic or manual valve to be fitted into the cartridge to select the valve in the open or closed condition.

Page 109: The **DF*B-8** two-position, two-way normally closed port 2 to 1, directional valve with a T-8A cavity in the end of the cartridge. This enables a Sun pilot solenoid, pneumatic or manual valve to be fitted into the cartridge to select the valve in the open or closed condition.

Pilot Control Cartridge Valves

Page 125: The **DAAM** is a manually operated, two-position, two-way pilot valve. This valve could be fitted into any cartridge with a T-8A cavity in the end to provide manual switching. Available with momentary, detented, or dual operator.

Page 129: The **DBAM** is a manually operated, two-position, three-way valve.

Circuit Savers

Page 146: The **COFO** is a 120:1 ratio, pilot to close check valve in series 2 only. This valve is specifically designed for accumulator unloading and dump circuits when the pump is not operating.

Page 152: The **DS*X** is a two-position, three-way, vent-to-shift, normally closed diverter valve. This valve could be used in parallel with flow divider valves to enable the function to be bypassed in traction drive circuits.

Page 153: The **DS*Y** is a two-position, three-way, vent-to-shift diverter valve. This valve works as a simple flow diverter valve.

Page 154: The **LHDT** is a bi-directional, normally open modulating valve in series 1 only. This valve can be used with an external orifice to provide pressure compensated flow control in both directions.

Hybrid Relief Cartridge Valves

Page 156: The **HRDA** is a dual function cartridge providing both a direct acting relief valve and check valve. The relief function is before the check valve.

Page 157: The **HRDB** is a dual function cartridge providing both a direct acting relief valve and check valve. The relief function is after the check valve.

Page 158: The **HVCA** is a dual function cartridge providing both a ventable pilot operated relief and check valve. The ventable relief function is before the check valve.

Page 159: The **HVCA-8** is a dual function cartridge providing both a normally closed modulating function and a check valve and a T-8A cavity in the end of the cartridge. This would enable a Sun pilot valve such as a pilot proportional valve to provide a proportional pressure control and check function in one cartridge.

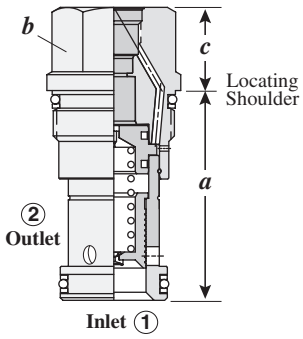
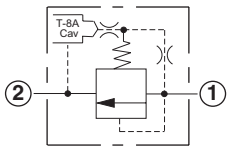
BALANCED PISTON, MODULATING ELEMENT WITH INTEGRAL PILOT CONTROL CAVITY





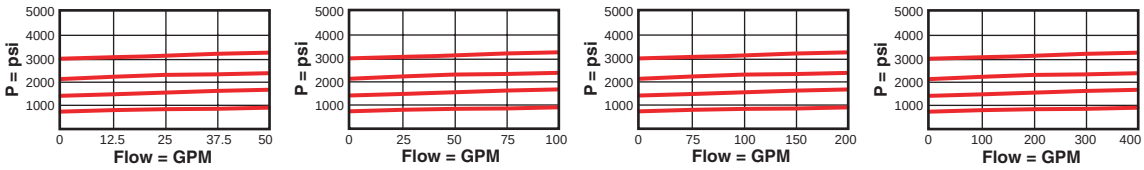
The -8 control option allows a pilot control valve to be incorporated directly into the end of the modulating element via the T-8A cavity. These pilot control cartridges are sold separately and include electro-proportional, solenoid, air pilot, and hydraulic pilot operation. See Pilot Control Cartridges on page 121.

Capacity	*Typical Cartridge Model Code*	*Cavity*	*Cartridge Dimensions*			*Installation Torque (lb. ft.)*
			a	*b*	*c*	
25 GPM	**RPEC – 8WN**	T - 10A	1.56	7/8	.75	30/35
50 GPM	**RPGC – 8WN**	T - 3A	1.88	1 1/8”	.69	45/50
100 GPM	**RPIC – 8WN**	T - 16A	2.44	1 1/4”	.97	150/160
200 GPM	**RPKC – 8WN**	T - 18A	3.13	1 5/8”	1.18	350/375

Performance Curves

RPEC-8 **RPGC-8** **RPIC-8** **RPKC-8**

Pressure vs. Flow



- Maximum operating pressure = 5000 psi
- Will accept maximum pressure at Port 2.
- Back pressure on the tank port (port 2) is directly additive at a 1:1 ratio to the valve setting
- Control pilot flow = RPEC-8: 7 to 10 in^3/min., RPGC-8: 10 to 15 in^3/min., RPIC, RPKC-8: 15 to 20 in^3/min.
- Maximum leakage = RPEC-8: 2 in^3/min./1000 psi: RPGC-8: 3 in^3/min./1000 psi, RPIC-8: 4 in^3/min./1000 psi, RPKC-8: 5 in^3/min./1000 psi.
- With the -8 control option, the main stage valve should first be installed to the correct torque value. The T-8A pilot control valve should then be installed into the main stage valve to its required torque value.

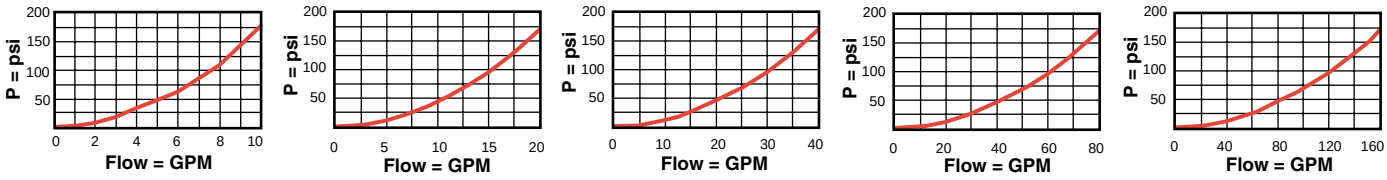
Pressure Drop Sequenced Open



- Maximum operating pressure = 5000 psi
- Maximum leakage = SQDB: 2 in^3/min./1000 psi , SQFB: 3 in^3/min./1000 psi , SQHB: 4 in^3/min./1000 psi SQJB: 5 in^3/min./1000 psi
- Typical response time 25 ms
- Pressure at port 3 is directly additive to the valve setting at a 1:1 ratio and should not exceed 5000 psi.
- To reset valve, flow through the cartridge must cease.

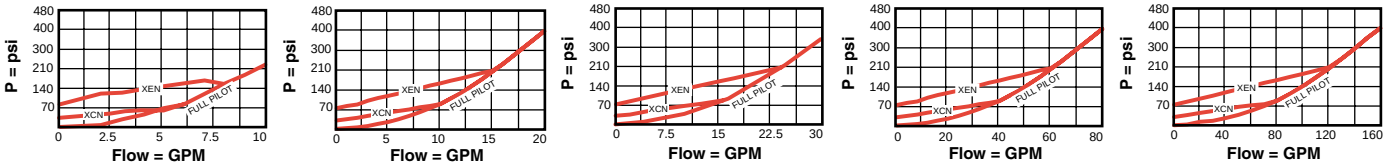
Typical Pressure Drop



- Maximum operating pressure = 5000 psi
- Maximum valve leakage = 1 drop/min.
- CKBB, CKBD available only with 30 psi or 75 psi check valve cracking pressures.
- CK*D has sealed pilot for use in circuits where cross port leakage is undesirable.
- CK*B has unsealed pilot to allow air trapped in the pilot line to be purged from the circuit.

Performance Curves

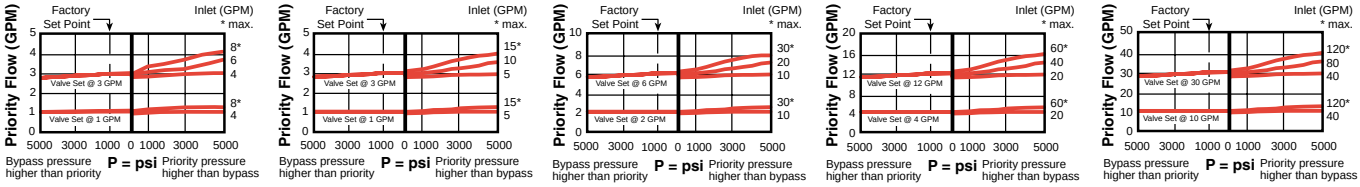
FRBA **FRCA** **FRDA** **FREA** **FRFA**

Typical Performance



- Maximum operating pressure = 5000 psi
- Customer must specify a flow rating. Factory set flow ratings are within +/- 10% of the requested setting.
- Pressure at the bypass port (port 2) may exceed pressure at the priority port (port 3).
- Maximum pressure at port 3 should be limited to 3000 psi.
- Both priority and bypass flow are usable up to the system operating pressure.
- Bypass flow is not available until priority flow requirements are satisfied.
- Blocking priority flow will also block bypass flow.

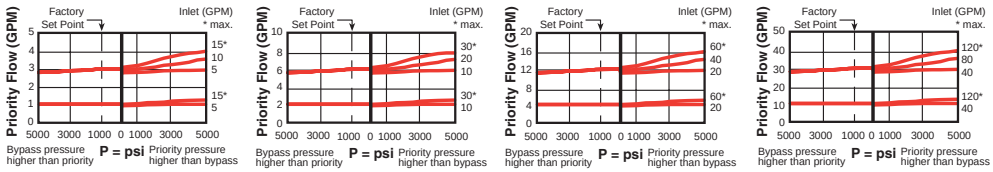
Performance Curves

FVCA **FVDA** **FVEA** **FVFA**

Typical Performance



- Maximum operating pressure = 5000 psi
- Nominal vent flow = 46 in³/min.
- Pressure at the bypass port (port 2) may exceed pressure at the priority port (port 3).
- Maximum pressure at port 3 should be limited to 3000 psi.
- Both priority and bypass flow are usable up to the system operating pressure.
- Bypass flow is not available until priority flow requirements are satisfied, except when the valve is vented. When port 4 (vent) is open, all flow diverts to port 2 if pressure at port 1 (inlet) is 150 psi or higher.
- Using a pressure control on port 4 will limit the pressure at the priority port (port 3). If pressure on the bypass port (port 2) exceeds the setting of the pressure control, priority flow will be shut off and all the flow will go out the bypass port.
- Blocking priority flow will also block bypass flow.

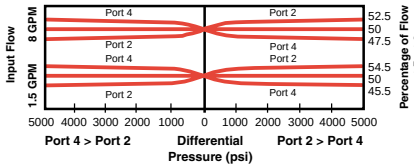
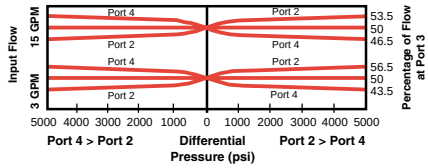
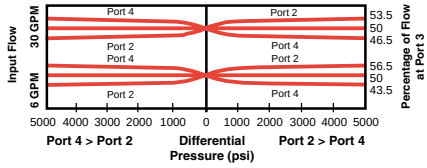
FSCD-XAN



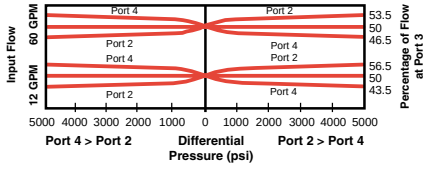
FSDD-XAN



FSED-XAN



FSFD-XAN



- Maximum operating pressure = 5000 psi
- This valve is a divider only; any attempt to flow backwards through the valve is not advised.
- Divisional accuracy at maximum rated input flow = FSBD: ±2.5%, FSCD, FSDD, FSED, FSFD: ±3.5%
- Divisional accuracy at minimum rated input flow = FSBD: ±4.5%, FSCD, FSDD, FSED, FSFD: ±6.5%
- Pressure drop at maximum input flow = 250 psi
- Pressure drop at minimum input flow = 10 psi
- Below the minimum flow rating there is not enough flow for the valve to modulate. It is effectively a tee. If flow starts at zero and rises, there will be no dividing control until the flow reaches the minimum rating.

Performance Curves

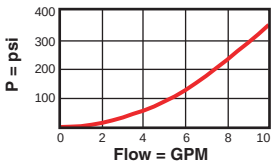
DV✶✶-8

Typical Pressure Drop



- Maximum operating pressure = 5000 psi
- Control pilot flow at opening = DVBA-8, DVBB-8, DVBC-8, DVBD-8 = 7 - 10 in³/min., DVCA-8, DVCB-8, DVCC-8, DVCD-8 = 10 - 15 in³/min.
- Maximum leakage per path = 2 in³/min. at 1000 psi
- Maximum pressure at port 3 should be limited to 3000 psi.
- There must be a pressure source at port 1, relative to port 3, to shift the valve.
- Pressure at port 3 may oppose the opening of the valve. Because of this, port 3 may not be useable as a work port in your circuit. If this is a consideration, the 4 port version of this valve may be a solution.
- The main stage valve should first be installed to the correct torque value followed by the T-8A pilot control section into the main stage valve to its required torque value.

- Maximum operating pressure = 5000 psi
- Maximum Leakage at 150 SUS = 10 drops/min.
- Switching frequency = 15000 cycles/hr.
- Cartridge can be installed directly into a cavity in some Sun pilot operated and ventable cartridges to provide electrically operated pilot control functions.
- Proper installation of solenoid valves requires an extra deep socket to clear the solenoid tube. Sockets are available from Snap On tools (P/N SIML280) or Sun Hydraulics (P/N 998-100-006). See www.sunhydraulics.com for details.

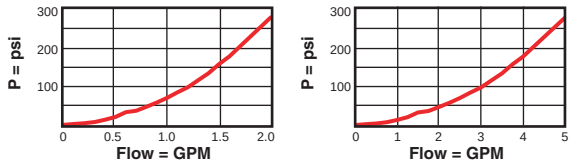
Typical Pressure Drop



- Maximum operating pressure = 5000 psi
- Pilot flow = DSCH, DSEH: 23 in³/min., DSGH, DSIH: 46 in³/min. (Port 2 and 4 to Port 3).
- Note: Low shift values can potentially result in charge pump pressure alone inadvertently shifting the valve. Use care when selecting shift pressure.
- Pressures on Ports 2 and 4 must equalize before reversed shift can take place.

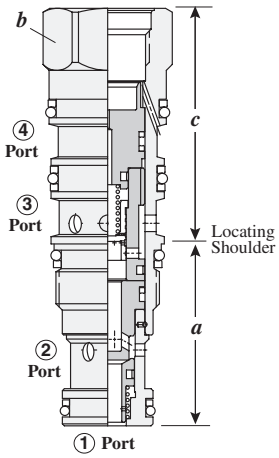
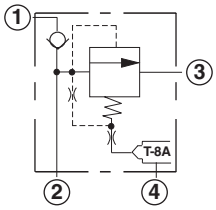
VENTABLE, PILOT OPERATED, BALANCED PISTON, RELIEF VALVE - BEFORE CHECK WITH INTEGRAL PILOT CONTROL CAVITY



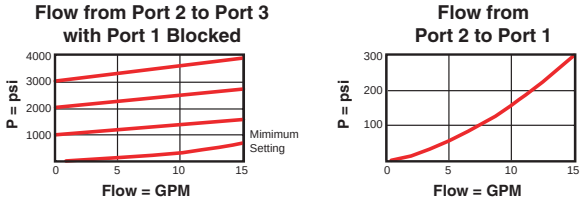


The -8 control option allows the pilot control valve to be incorporated directly into the end of the relief cartridge via the T-8A cavity. These pilot control cartridges are sold separately and include electro-proportional, solenoid, air pilot, and hydraulic pilot operation. See Pilot Control Cartridges on page 121.

Capacity	*Typical Cartridge Model Code*	*Cavity*	*Cartridge Dimensions*			*Installation Torque (lb. ft.)*
			a	*b*	*c*	
10 GPM	**HVCA – 8DN**	T - 21A	1.38	7/8	1.78	30/35

Performance Curves

HVCA-8



- Maximum operating pressure = 5000 psi
- Maximum valve leakage (port 2 to port 3) = 2 in³/min. at 1000 psi
- Free flow check cracking pressure = 25 psi
- Minimum setting is 75 psi for all spring ranges.
- Back pressure at port 4 (tank) is directly additive to the valve setting at a 1:1 ratio.
- The check portion of the valve has a maximum leakage rate of less than 1 drop/minute.
- Note: This valve deviates from Sun's normal flow path for four port relief valves; port 2 is the inlet, port 1 is the system, port 3 is tank and port 4 is vent. Therefore, it is probably not useable in existing standard Sun relief manifolds.
- With the -8 control option, the main stage valve should first be installed to the correct torque value. The T-8A pilot control valve should then be installed into the main stage valve to its required torque value.

NOTES

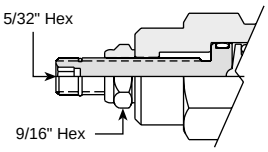
General Information

Cartridge Control Options

General Purpose Controls (for use in systems where adjustment may be changed after installation.)

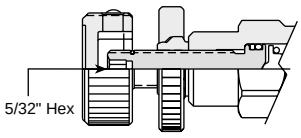
L Standard Screw Adjustment

O-ring seal on adjust screw. Adjust screw positively retained. Overset protection-pilot spring cannot go solid.



K Handknob with Lock Knob

Handknob and lock knob added to **L** control. Sun handknob kits for field conversion are available.



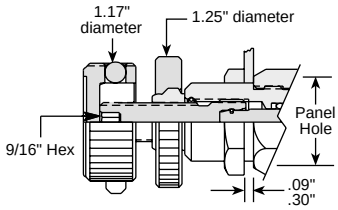
O Handknob with Panel Mount

Special threaded cartridge hex body with panel nut for mounting cartridge through access hole in control panel. Handknob and lock knob included.

Panel Hole:

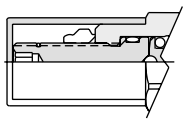
Series 1 cartridges .75" dia.
Series 2 cartridges 1.00" dia.

Panel nut hex size identical to cartridge hex size.



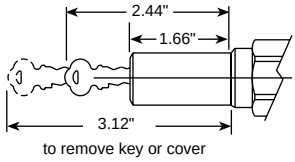
C Tamper Resistant Factory Set

Cover press-fit onto **L** control cartridge shoulder. Valves may be ordered in this configuration from Sun. ***Specify pressure setting on order.*** Setting stamped on cartridge hex. Sun kits for field conversion are available.



Key Lock Kit

Optional adjustment Key Lock Cover Kit for **L** controls allows adjustment to be locked with a key to prevent unauthorized changes in valve setting. Adjustment is easily accessible when lock assembly is removed. Requires replacement of standard locknut with special locknut which accepts lock assembly, and a new wire stop ring for overset protection.



H Calibrated Handknob with Detent Lock

Fully calibrated handknob for flow control cartridges. 40 radial calibrations per turn. Moveable zero indicator. (Minor disassembly required.) Rising detented locking collar positively locks adjustment knob against vibration or accidental tampering. Any desired setting may be recorded and repeated. U.S. Patent #4,577,831.

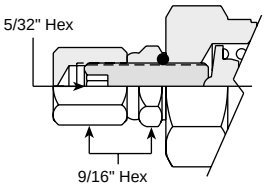
Special Purpose Controls (for use in systems where adjustment is seldom changed after installation)

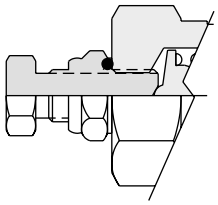
J Socket Head Set Screw with Cap

Stem seal - Seal under locknut. Adjustment screw not retained. No overset protection.



F Wrench Adjustment

Stem seal - Seal under locknut. Adjusting screw is not retained. Overset protection-pilot spring cannot go solid.



Counterbalance Cartridge Controls

All Sun counterbalance cartridges are built with a leakproof adjustment - O-ring seals are on the adjusting screw-but are not designed for frequent adjustment in the field. Cartridges that are factory pre-set by Sun to a customer specified pressure setting are available and can be installed directly on a machine without the need for further adjustment.

C Tamper Resistant Factory Set

See **"C"** Control description above.

L Standard Leakproof Screw Adjustment.

O-ring seal on adjust screw.

Service Kit Number Description	*Use specifically with Control/Cartridge*	*Description*	*Notes*
Adjustment Screw Kit **991-006** Adjustment Screw Kit **991-010**	All **F** controls All **J** controls		To assure a complete seal on the stem - release all pressure on the cartridge after setting. **Then...** tighten locknut (and cap, on **J**).
Tamper Resistant Cover **991-000** **991-004** **991-001** **991-002** **991-003** **991-032** **991-033**	For all Sun cartridges with **L** adjustment Series 0 - 3/4" hex Series 1 - 7/8" hex Series 2 - 1 1/8" hex Series 3 - 1 1/4" hex Series 4 - 1 5/8" hex Series 1 - 7/8" hex (CB**, CC**) Series 2 - 1 1/8" hex (CB**, CC**)		1. Adjust valve to desired setting and tighten locknut. 2. Using an arbor press or a soft hammer, install cover until it seats on cartridge hex. 3. Cover is a press fit on cartridge shoulder.
Key Lock Kit **993-008**	For all Sun cartridges with **L** adjustment (except Series 0 and counterbalance cartridges).		1. Remove original wire stop ring and locknut. 2. Thread on the adapter locknut and install new wire stop ring through slot provided. 3. Adjust valve to desired setting and tighten adapter locknut. 4. Slide lock assembly over adapter, lock and remove key.
Three-winged Handknob Kit **991-034**	For all Series 1, 2, 3, 4 valves with **L** or **O** adjustment except counterbalance cartridges.	Install while cartridge is screwed in cavity to prevent damage. 	1. Do not remove stop ring. 2. Install lock knob by snapping onto the locknut. 3. Install star knob until contact is made with the stop ring. 4. Caution during installation on flow control valves (that have no stop ring). Make sure valve can be shut with hand knob installed. 5. Insert pins in cover so that they project on backside. 6. Put cover on with inserted pins and drive pins in until flush with cover.
	The handknob can be used as a Maximum Setting Limiter.		When knob is used as a maximum Setting Limiter: 1. Set valve at desired maximum setting. 2. Tighten lock nut (110 lbs. inch). 3. Remove stop ring. 4. Install lock knob. 5. Install handknob until flush with the lock knob.
Three-winged Handknob Kit with 1 3/8" dia. aluminum lock knob. **991-039**	This kit should be used in applications where there is high vibration and a plastic lock knob may loosen.		Follow installation instructions described above.

Cartridge Control Kits continue on next page

Cartridge Control Kits

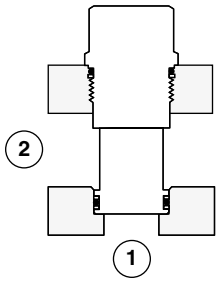
Service Kit Number Description	*Use specifically with Control/Cartridge*	*Description*	*Notes*
K Handknob Kit **991-211**	Use this kit to adapt all **L** controls to **K** controls (except Series 0 and counterbalance cartridges).		Only cartridges date stamped "41" or later and originally supplied with plastic knobs. Lock knob snaps onto locknut furnished on cartridge.
991-222	**K** control for Series 0		
Panel Handknob Kit **991-215**	**O** controls All Series 1 cartridges 7/8" hex M20 thread		
Panel Handknob Kit **991-216**	**O** controls All Series 2 cartridges 1 1/8" hex 1"-14 thread		
H Calibrated Handknob Kit	**H** controls All series of flow controls		Only for cartridges originally supplied with an **H** handknob. Valves can not be modified in the field. **Note:** The **H** control is **Only** available for the cartridges shown to the left.
991-219	**FDCB**, **NCEB**, **NCEC**, **NFDC, NFDD** only		
991-220	**FDEA**, **FDFA**, **NCFB**, **NCFC**, **NCGB**, **NCGC**, **NFEC**, **NFED, NFFC, NFFD** only		
991-221	**FDBA**, **NCCB**, **NCCC**, **NFCC, NFDC** only		
Lockwire Kit **991-012**	All **M**, **Q** and **R** controls (except solenoid operated cartridges).		
Adjustment Screw Kit **991-112-003 Viton** **991-112-007 Buna-N**	**CKCA L**CKCD L**** **CKCB L**CPCA L**** **CKCC L****		**Only** cartridges date stamped "62" or earlier.
Adjustment Screw Kit **991-212-003 Viton** **991-212-007 Buna-N**	**CKEA L**CKED L**** **CKEB L**CPEA L**** **CKEC L****		

Cavity Plugs

It is sometimes desirable to remove a Sun cartridge valve and still maintain the integrity of the hydraulic system. This may be necessitated by the need to flush a system after repairs or a piping change, or to change an operating function in the circuit. For these requirements, Sun offers two styles of cavity plugs - all ports blocked and main ports open to flow.

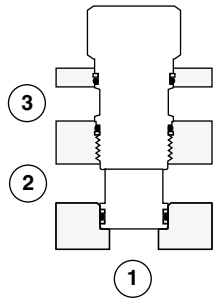
Plugs for Two Port Cavities:

		All Ports Open			All Ports Blocked		
Series	*Cavity*	*Cavity Plug Model Code**	*Buna-N*	*Viton*	*Cavity Plug Model Code*	*Buna-N*	*Viton*
P	T-8A	XAOA-XX*			XACA-XX*		
0	T-162A	XZOA-XX*			XZCB-XX*		
1	T-10A	XFOA-XX*			XFCA-XX*		
	T-13A				XGCA-XX*		
2	T-3A	XCOA-XX*			XCCA-XX*		
	T-5A				XDCA-XX*		
3	T-16A	XIOA-XX*			XICA-XX*		
4	T-18A	XKOA-XX*			XKCA-XX*		



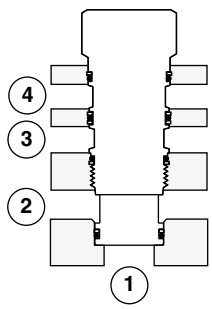
Plugs for Three Port Cavities

		Ports 1 to 2 Open Port 3 Blocked			All Ports Blocked		
Series	*Cavity*	*Cavity Plug Model Code**	*Buna-N*	*Viton*	*Cavity Plug Model Code*	*Buna-N*	*Viton*
P	T-9A	XAOB-XX*			XACBXX*		
0	T-163A	XZOB-XX*			XZCB-XX*		
1	T-11A	XEOA-XX*			XECA-XX*		
2	T-2A	XBOA-XX*			XBCA-XX*		
3	T-17A	XHOA-XX*			XHCA-XX*		
4	T-19A	XJOA-XX*			XJCA-XX*		



Plugs for Four Port Cavities (Internal Locating Shoulder)

		Ports 1 to 2 Open Port 3 and 4 Blocked			All Ports Blocked		
Series	*Cavity*	*Cavity Plug Model Code**	*Buna-N*	*Viton*	*Cavity Plug Model Code*	*Buna-N*	*Viton*
1	T-21A	XMOA-XX*			XMCA-XX*		
2	T-22A	XNOA-XX*			XNCA-XX*		
3	T-23A	XPOA-XX*			XPCA-XX*		
4	T-24A	XQOA-XX*			XQCA-XX*		

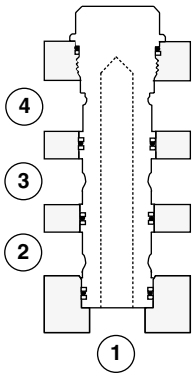


*Insert in the seventh position model code digit N to order Buna-N seals or V to order Viton seals.

Visit www.sunhydraulics.com for detailed and complete technical information on our full line of products.

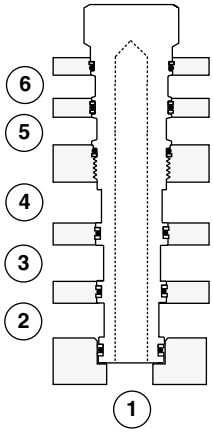
Plugs for Four Port Cavities (External Locating Shoulder)

		All Ports Open			All Ports Blocked		
Series	*Cavity*	*Cavity Plug Model Code**	*Buna-N*	*Viton*	*Cavity Plug Model Code**	*Buna-N*	*Viton*
1	T-31A	**XFOA-XX***			**XRCA-XX***		
2	T-32A	**XCOA-XX***			**XSCA-XX***		
3	T-33A	**XIOA-XX***			**XTCA-XX***		
4	T-34A	**XKOA-XX***			**XVCA-XX***		



Plugs for Six Port Cavities

		Ports 1, 2, 3 and 4 Open Ports 5 and 6 Blocked			All Ports Blocked		
Series	*Cavity*	*Cavity Plug Model Code**	*Buna-N*	*Viton*	*Cavity Plug Model Code**	*Buna-N*	*Viton*
1	T-61A	**XMOA-XX***			**XRCC-XX***		
2	T-62A	**XNOA-XX***			**XSCC-XX***		
3	T-63A	**XPOA-XX***			**XTCC-XX***		
4	T-64A	**XQOA-XX***			**XVCC-XX***		



Cavity Adaptor (Converts Waterman 12-2 Cavity to the Sun T-8A Cavity)

	All Ports Open		
Cavity	*Cavity Plug Model Code**	*Buna-N*	*Viton*
12-2	**XAAA-8X***		

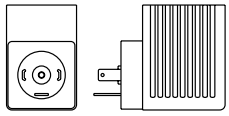
*Insert in the seventh position model code digit N to order Buna-N seals or V to order Viton seals.

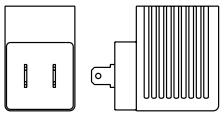
Sun Solenoid Electrical Connector Options

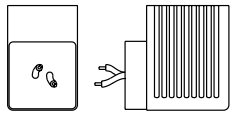
Sun Hydraulics has a range of pilot flow and full flow solenoid products with operating pressures up to 5000 psi. These products are available with the coil configuration options shown below. If you only require pilot flow and want to operate these packages in a 5000 psi system, Sun offers a screw-in adapter that converts the Waterman 12-2 cavity to a Sun T-8A cavity.

Connector Options for Sun Pilot Flow Solenoid Valves (DAAA, DBAA)

ISO / DIN 43650 | **SAE J858-A** | **Twin Lead**



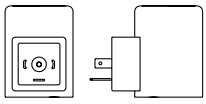


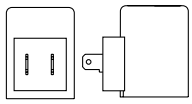


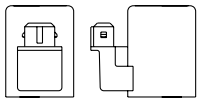
Description	*Coil only part number*	*Coil only part number*	*Coil only part number*
115 V AC 50/60 Hz	760-211	N/A	N/A
230 V AC 50/60 Hz	760-223	N/A	N/A
6 V DC	760-206	760-506	760-706
12 V DC	760-212	760-512	760-712
24 V DC	760-224	760-524	760-724
28 V DC	760-228	760-528	760-728
36 V DC	760-236	760-536	760-736
48 V DC	760-248	760-548	760-748

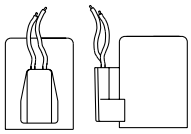
Connector Options for Sun Full Flow Solenoid Valves (DLDA, DTDA, DMDA, DNDA) and Proportional Valves (RBAP, PRDP, PRDL)

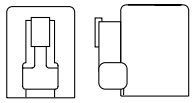
ISO/DIN 43650 | **Twin Spade (SAE J858A)** | **AMP® Junior Timer** | **Twin Lead** | **Metri-Pack** | **Deutsch**

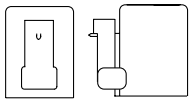












Description	*Coil only part number*	*Coil only part number*	*Coil only part number*	*Coil only part number*	*Coil only part number*	*Coil only part number*
115 V AC 50/60 Hz	770-211	N/A	N/A	N/A	N/A	N/A

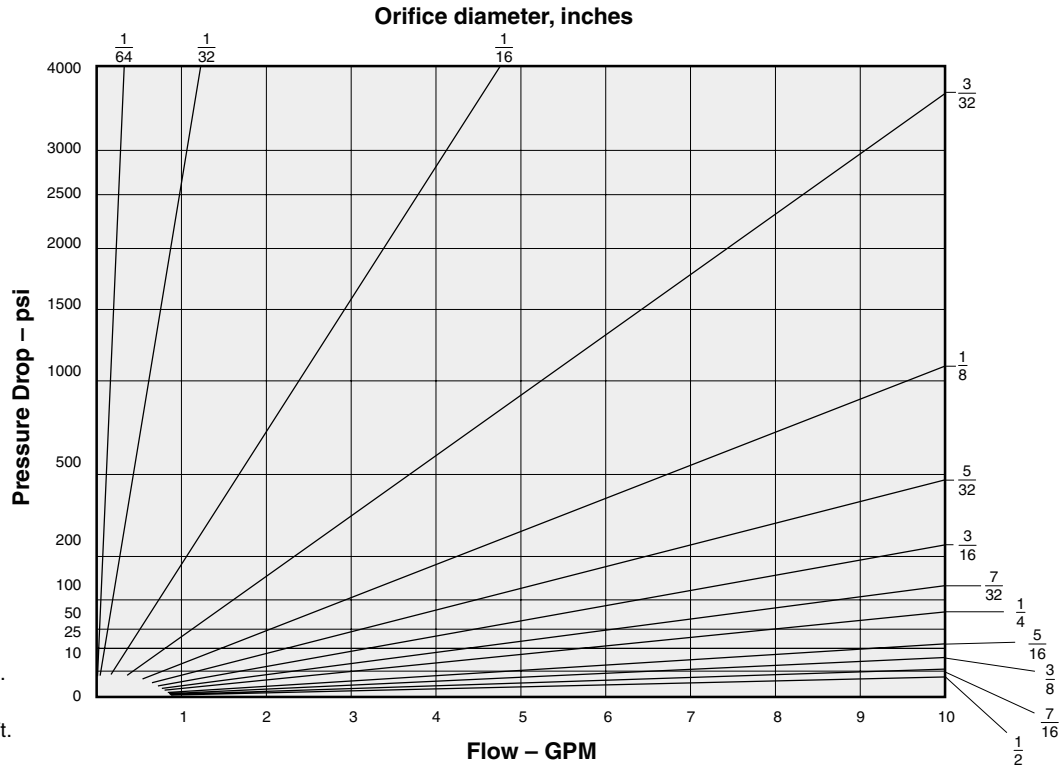
48VDC*	770-248*	770-548*	770-648*	770-748*	770-848*	770-948*

*Insert in the seventh position model code digit N to order Buna-N seals or V to order Viton seals.

ORIFICE PRESSURE DROP DATA

No allowance has been made for viscosity effects, or regain of pressure downstream.



These charts are based on the formula:

$$Q = C \times A \times \sqrt{2_g H}$$

Where:

- Q = Flow in Cu. Ft. per Sec.
- C = Orifice Coefficient
- A = Area of Orifice in Sq. Ft.
- H = Pressure Head in Ft.

Specify Gravity of Fluid = .895

This equation becomes
Q(GPM) = 24.12 x A(sq.in.) x $\sqrt{\text{Pressure Drop}}$ (psi) when C = 0.6

WARRANTY INFORMATION, PERFORMANCE ASSURANCE, AND APPLICATION LIMITATIONS

Caution

Sun Hydraulics manufactures a variety of cartridge valves that will fit into the same Sun cavity. Each cartridge is marked with a seven-digit part identification code and a four-digit date code, stamped on the hex surfaces. Designers and users of Sun components are advised that **physical interchangeability of cartridges does not necessarily mean functional interchangeability.** When replacing any Sun cartridges, users should first check with the manufacturer's service literature, their local Sun distributor, or the Sun factory before making any part substitutions.

NOTE: To avoid serious injury, the manufacturer's service literature must be consulted before working on any hydraulic system.

Limited Warranty

Sun Hydraulics warrants its products free from defects in material, workmanship, and design for a period of three years after their installation, provided the installation date is less than one year after manufacture. **"O-rings" and seals are specifically exempted from this warranty.** In no instance is there any warranty of fitness for a particular use and Sun Hydraulics cannot and does not accept responsibility of any type for any of its products that have been subjected to improper installation, improper application, negligence, tampering, or abuse, or which have been repaired or altered outside of the Sun Hydraulics factory. Sun's liability under this warranty shall extend only to repair or replacement, f.o.b. Sun's factory, of any defective part or product determined by inspection as not conforming to this warranty. Sun makes no other warranties, expressed or implied, and is not responsible for any consequential damages resulting from use by any buyer or user, Sun Hydraulics' liability being limited to the value of product sold or obligation to replace a defective part.

Performance Assurance

All Sun cartridges valves are individually tested at the factory and preset to specific pressure or flow settings where indicated in this product listing. However, as the actual performance of buyers' equipment cannot be reproduced in Sun's testing laboratory, assurance of suitability of Sun products in the buyer's application is the responsibility of the buyer. This is typically accomplished by the manufacture of a prototype followed by a test or qualification program on the part of the buyer.

Application Limitations

Sun product designs and manufacturing facilities have been specifically developed to provide products for commercial, industrial and mobile hydraulic applications and Sun products are only warranted for these types of uses. **Sun's distributors are not authorized to approve the use of Sun products in any of the following applications:**

- Any product that comes under the U.S. Federal Highway Safety Act, including, but not limited to, steering or braking systems for passenger-carrying vehicles or on-highway trucks.
- Aircraft or space vehicles.
- Ordnance equipment.
- Life support equipment.
- Any end product that comes under the U.S. Nuclear Regulatory Commission rules and regulations, including, but not limited to, products used in nuclear power plant operations.

Specific written approval for any application of Sun products in any of the above named applications should be obtained from Sun Hydraulics. Consultation with Sun distributors or factory engineers is advisable in any situations where applicability is questionable.
